Review of: "Sero-prevalence of Viral Hepatitis B and C infection and associated factors among Pregnant Women in Southeast Ethiopia: Community-based crossectional study"

Samirah Awak David [1]

1. Microbiology, University of Jos, Nigeria

1. Table 2 should be presented before Table 1, as the study's focus is on sero-prevalence (presented in Table 2) and associated risk factors (presented in Table 1). With prevalence preceding the examination of risk factors, it is logical to present the overall sero-prevalence data prior to examining risk factors.

2. For enhanced clarity, the title could be rephrased as: Sero-prevalence of Hepatitis B and C Viral Infections and Associated Factors among Pregnant Women in Southeast Ethiopia.
