Review of: "Biodegradable and Biocompatible Bioplastic Polymer Nanocomposites – A Review"

Farnaz Sadat Fattahi[1]

1. Isfahan University of Technology, Iran, Islamic Republic of

Dear respected editor, the idea is very good, but some points need to be clarified. 1. There are many articles on the web that are similar to this article. So, to make a difference, initiatives in the manuscript are required. For example, in my opinion, it is better to add at least one more table to the text. 2. For quick comprehension, increasing visual appeal, and improving paper quality, it is suggested to add schematics instead of figures 3, 6, 7, 8, 9, and 10. 3. Draw the chemical structure of bio-polymers. 4. Check the whole article grammatically. 5. It is suggested that some appropriate references be added, such as: Sustainable, Renewable, and Biodegradable Poly (Lactic Acid) Fibers and Their Latest Developments in the Last Decade: Sustainability in the Textile and Apparel Industries, 173. 6. Number the tables and figures carefully.
