Review of: "Thermosensitive Liposomal Drug Delivery Systems: A Review"

Farnaz Sadat Fattahi[1]

1. Isfahan University of Technology, Iran, Islamic Republic of

1. Dear respected editor, the idea is very good, but some points need to be clarified.

1. There are many articles on the web that are similar to this article. So, to make a difference, initiatives in the manuscript are required. For example, in my opinion, it is better to add at least one table to the text.
2. For quick comprehension, increasing visual appeal, and improving paper quality, it is suggested to add schematics to the mentioned manuscript section.
3. The application of polymeric **Thermosensitive Liposomal Drug Delivery Systems** as drug delivery platforms should be explained in a separate section very carefully.
4. It is suggested that some appropriate references be added, such as:

Poly (lactic acid) nanofibres as drug delivery systems: Opportunities and challenges

Nanomedicine Research Journal 4 (3), 130-140
