Manuscript Title: Polymeric Organo-hydrogels: novel biomaterials for medical, pharmaceutical, and drug delivery platforms

Authors: Nahit Aktas, Duygu Alpaslan, Tuba Erşen Dudu

Manuscript Needs Revision (Major Revision)

Dear respected editor, the idea is very good, but many points need to be clarified:

1. There are many articles on the web that are similar to this article. So, to make a difference, initiatives in the manuscript are required. For example, in my opinion, it is better to add at least one table to the text.
2. For quick comprehension, increasing visual appeal, and improving paper quality, it is suggested to add schematics to the mentioned manuscript section: “Organo-gels: Novel biomaterials in medication and pharmaceutical utilizations”.
3. The application of polymeric organo-hydrogels as drug delivery platforms should be explained in a separate section very carefully with schematics and tables.
4. The references are not sufficient for this important topic (at least 100 articles should be reviewed).
5. - The text needs to be edited by a person fluent in the English language.

With best regards.
