Review of: "The Impact of TikTok on Students: A Literature Review"

Emmanuel Lawani[1]

1 University of Ibadan

The researcher should take note of the steps below. I believe this should make the paper better.

1. **Expand the Literature Review:**

   - As you mentioned, consult more studies related to the use of social media, specifically focusing on TikTok and its impact on academic performance.
   - For each subheading, gather relevant studies and references that can be cited to strengthen the rationale and argumentation.

2. **Recommend a Systematic Review:**

   - In each subheading, where fewer studies have been cited, consider recommending a systematic review as a research method. Systematic reviews are valuable for summarizing and synthesizing existing literature comprehensively.

3. **Address Unanswered Questions:**

   - Under the subheading "The Effects of TikTok Use on College Student Learning," emphasize the need to answer the question about how much time students actually spend on TikTok and its impact on their attention and academic performance.
   - Suggest that the researcher conduct an in-depth study to address this question and gather data on the negative effects of TikTok use on college students' learning.

4. **Cite Relevant Studies:**

   - When recommending a systematic review or addressing unanswered questions, provide examples of existing studies that the researcher can cite to support their arguments.
   - Ensure that the citations are current and relevant to the research topic.
