# Laryngeal abductor paralysis-intellectual disability syndrome

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Laryngeal abductor paralysis-intellectual disability syndrome. ORPHA:2375*

Laryngeal abductor paralysis-intellectual disability syndrome is characterised by congenital and permanent laryngeal abductor paralysis, associated, in the majority of cases, with intellectual deficit. It has been described in several families. X-linked inheritance is likely.
