# PALLD wt Allele

National Cancer Institute

## Source

National Cancer Institute. *PALLD wt Allele*. NCI Thesaurus. Code C79792.

Human PALLD wild-type allele is located in the vicinity of 4q32.3 and is approximately 431 kb in length. This allele, which encodes palladin protein, plays a role in cellular morphology, motility and adhesion. Genetic variants and aberrant expression are associated with susceptibility to pancreatic cancer type 1.
