Potential competing interests: No potential competing interests to declare.

The part Introduction is too short. I think citation to references are missing. I recommend adding and to cite relevant papers and publications. The part Methods is too short.

In the part Results is possible to add information about social problems with lack of social contact and so on during Covid 19 time

The part "Online or traditional teaching?" belongs to the experimental part? If yes, I recommend adding in the part Methods the explanation, how the questions 1, 2... were selected.

The part Conclusion is too short, it should also obtain information about limitation of the study and vision about further research.

The part References should obtain more relevant items if the paper is for research journal.
