**Potential competing interests:** No potential competing interests to declare.

The paper is a review of the processing and preservation methods used in the production of apple juice, a product large consumed around the world. The review presented and discussed the various techniques used in the extraction and clarification of apple juice, with emphasis on the preservation of flavor and nutritional quality. The health benefits of apple juice were shown and discussed.

The method of review used in the paper, such as literature sources (papers, books, conference papers), was not shown. Also, it is important to show the key words used in selecting the papers considered for the review and the time period for which the review was made.

Minor observations:

Observations:

1) Page 4: The reference sources for the data in Table 1 were not indicated.
