This is one of nice model of work, entitled "Reprogramming of GLP-1 Response at Prediabetes for the Prevention of Type 2 Diabetes: The Role of Albumin and GLP-1 Receptor Agonists" , it can help in prediabetes and prevention for the one of the most common systemic diseases in the world. The authors need to add and support this manuscript with more details to link between albumin, an immune environment, and the risk of type 2 diabetes and also support the theory of )reduced albumin levels predict incident type 2 diabetes) by more research conducted in this part.
