

# Review of: "An Explorative Review of Artificial Intelligence Software (Chatbot) Impact on Education System"

Yunfei Du

Potential competing interests: No potential competing interests to declare.

1. the methodology section should be more specified to explain how the author collected data of chatbots, how these data were synthesized. For example, the integrative review, systematic review or meta-analysis can be adopted.
2. the classification of the three types of chatbots are a bit cursory. Besides, some examples like ChatGPT, Pi, SpokenBot, Alexa should be given to illustrate.
3. Anyway, since the author concentrates to review these software, paying more attention to the system structure, algorithms, and technological affordances are in demand.
4. Overall, it's a bright idea to explore the relationship between chatbots and education. But, the holistic quality of the paper should be improved.
