Potential competing interests: No potential competing interests to declare.

Remarks:

1. The gelatin coat solution was prepared using a glycerin solution with a concentration of 25%. Was the concentration of glycerin used optimal? Was it chosen by the authors, or did the authors rely on literature data?
2. The authors wrote in the Results and Discussion section "that the antimicrobial activity of the whey coating can be affected by accompanying factors." Please list these factors and briefly discuss them in relation to the study conducted and the results obtained.
3. If the names of bacterial strains appear for the first time in the manuscript, then use their full names and not abbreviations. Please verify this throughout the manuscript.
4. Table 1 and Figure 1 show the same results.
5. In the References section, journal names should be capitalized.
