# VHL-59: 116-128 Peptide

National Cancer Institute

## Source

National Cancer Institute. *VHL-59: 116-128 Peptide*. NCI Thesaurus. Code C38123.

A peptide vaccine consisting of amino acids 116 through 128 derived from the tumor suppressor protein Von Hippel-Lindau (VHL) with a frameshift mutation. As a cancer vaccine, VHL-59: 116-128(FrSh116-128) peptide may stimulate a cytotoxic T-lymphocyte (CTL) response against tumor cells expressing this VHL mutant protein.
