Behavioural reflectiveness

Behaviour Change Intervention Ontology (BCIO)

Definition: A behavioural attribute that is the degree to which the behaviour is under the control of reflective motivation.

Informal definition: How far a behaviour is enacted after thinking about it and its consequences.

Comment: This class is a dimension and involves any conscious thought processes that lead to a behaviour in some way, even if those processes are themselves influenced by emotional processes and biases.

This definition was imported from the Behaviour Change Intervention Ontology (see <https://bciosearch.org/>).

Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
