Warty (Bowenoid) Penile Intraepithelial Neoplasia

National Cancer Institute

Source

National Cancer Institute. *Warty (Bowenoid) Penile Intraepithelial Neoplasia*. NCI Thesaurus. Code C162543.

Intraepithelial neoplasia of the penis characterized by a slightly spiking papillomatous surface with atypical parakeratosis. There is prominent cellular pleomorphism, koilocytosis, and mitoses. Unlike in basaloid penile intraepithelial neoplasia, there is squamous maturation. (WHO 2016)
