Fibrosis-4 Score

National Cancer Institute

Source

National Cancer Institute. *Fibrosis-4 Score*. NCI Thesaurus. Code C138330.

A noninvasive test to assess hepatic fibrosis that utilizes common laboratory findings according to the formula: age (years) x aspartate aminotransferase (AST) [U/L]/(platelets $[10^9/L]$ x alanine aminotransferase (ALT) [U/L])^{1/2}.
