Potential competing interests: No potential competing interests to declare.

I think the authors should have focused on just one type of fly ash use in pavements, i.e., asphalt concrete or base;

This manuscript is very important, but it is necessary to put graphics and tables about the main information obtained in the literature.;

I think the graphical summary needs to be smaller, with only the main steps necessary for the main objective;

There are sentences with repeated messages. I think authors should read them again and improve their writing.;

These properties are about a type of fly ash application (soil stabilization), not in general...improve the sentence.;

As the authors report, there are several studies on the use of fly ash as a construction material for flexible pavements, but at the same time, they contradict themselves and say that there is a need for more studies...but this is very subjective...if we already have studies on the subject, we need to read and conclude where there are still gaps in knowledge that still need research;
