Potential competing interests: No potential competing interests to declare.

There are many mistakes I can clearly see in the manuscript.

1. The abstract is too long; only use related content.
2. Use the full forms of ECO-CSB and ECO-CSSB for the first time; then authors can use the short forms throughout the manuscript.
3. Better quality is needed just after the abstract.
4. No citation is used in the manuscript, which is quite strange, so I suggest authors add good quality citations to the manuscript.
5. Use some recently published literature that is related to concrete production. -
6. Methods of soil stabilization using inorganic binders are not clearly defined....Rewrite it.
7. The detailed explanation of Fig. 1 is missing....Unnecessary write-up is there....Check again.
8. For Table 4, the last column is missing...If it is not there, then remove it.
9. Show all the experimental outcomes with the help of graphical representation.
10. English and technical writing need to be improved throughout the manuscript.
11. A very poorly conclusion is written....Use bullet points with short conclusions.
12. Overall comments.....Add citations, figures, and graphs to the manuscript.
