Repaglinide

National Cancer Institute

Source

National Cancer Institute. *Repaglinide*. NCI Thesaurus. Code C47703.

A nonsulfonylurea insulin secretagogue belonging to the meglitinide class with hypoglycemic activity. Repaglinide is rapidly absorbed and has a rapid onset and short duration of action. This agent is metabolized in the liver by CYP2C8 and CYP3A4 and its metabolites are excreted in the bile. Repaglinide has a half-life of one hour.
