Potential competing interests: No potential competing interests to declare.

The novelty of the article lies in its comprehensive exploration of various aspects related to the longevity and sustainability of electric vehicle operations. It not only discusses the benefits of EVs in reducing greenhouse gas emissions and improving air quality but also addresses the challenges such as the need for a robust charging infrastructure and the environmental impact of battery production and disposal. The article emphasizes the importance of advancements in battery technology, the establishment of a charging infrastructure, and policy support in realizing a cleaner and more sustainable transportation future. Additionally, the article provides a list of research papers covering a wide range of topics related to electric and hybrid vehicles, showcasing the breadth of knowledge and research in this field.

Here are key points from articles,

- The article provides a comprehensive overview of the various aspects related to the longevity and sustainability of electric vehicle operations, highlighting the benefits, challenges, and potential solutions for a cleaner and more sustainable transportation future.
- I think, one criticism of the article is that it lacks a clear structure and organization. The information is presented in a somewhat scattered manner, making it difficult for readers to follow the main points and arguments. It would have been helpful to have a clear introduction and section headings to guide the reader through the different topics discussed.
- The the article mentions the challenges associated with EVs, such as the need for a robust charging infrastructure and the environmental impact of battery production and disposal, it does not provide in-depth analysis or potential solutions for these challenges. It would have been beneficial to include more detailed discussions on these topics and explore innovative approaches to address them.
- The article covers a wide range of topics related to electric vehicle operations, it lacks a clear structure, in-depth analysis of challenges, and synthesis of the research papers cited.
- A more organized and focused approach would have enhanced the readability and impact of the article.

Suggestions to enhance the article further

Improve organization and structure: The article would benefit from a clearer and more organized structure. It should include a clear introduction that outlines the main points and arguments to be discussed.

Provide in-depth analysis and solutions: While the article mentions the challenges associated with EVs.

Synthesize research papers: The article heavily relies on a list of research papers without providing sufficient analysis or synthesis of the information presented in those papers.
