Potential competing interests: The author(s) declared that no potential competing interests exist.

The authors discussed in this work the relation between the connection of heat and work and the conversion of work to heat. The following Comments may be considered

- literature review may be modified. I suggests at the end of the Introduction mention why we need such a work.
- The authors can cite more works.

For example the following two figures should be cited Fig. 1 and Fig. 2, also Fig. 2 needs more discussion
