# Muraglitazar

National Cancer Institute

## Source

National Cancer Institute. *Muraglitazar*. NCI Thesaurus. Code C75190.

A dual peroxisome proliferator-activated receptor (PPAR) agonist, with hypoglycemic activity. Muraglitazar causes an increase in HDL-C levels, and a decrease in total cholesterol, apolipoprotein B, triglycerides and HbA1c. This agent is associated with an increased risk of adverse cardiovascular events and heart failure.
