Review of: "An Intelligent Analytics for People Detection Using Deep Learning"

Olatunbosun Agbo-Ajala

Potential competing interests: No potential competing interests to declare.

The research work has significant potential due to its applicability in security and surveillance. However, to enhance its quality, I offer the following suggestions:

1. The author should provide more detailed explanations of the methods used, including mathematical equations and algorithms, to facilitate better understanding.

2. To clearly describe the dataset employed and the evaluation metrics used to assess performance.

3. To establish the novelty of the work by comparing the results with those of other related studies in the literature that used the same dataset.

4. To evaluate the performance of the proposed approach on multiple datasets to demonstrate its robustness and generalizability.

5. To elaborate on the three methods used, providing more insight into their implementation and effectiveness.

If the author can address these areas, it will strengthen the research work and provide a more comprehensive contribution to the field.
