Potential competing interests: No potential competing interests to declare.

This study has provided useful information for agricultural biotechnology and related fields. The authors have well-described the importance of the study. However, I have suggested the following:

- Keywords should be adjusted to 5 words.
- Please give future aspects and significance of the study.
- Please revise the topic of 4.1 ("Soil Erosion Dynamics and Amendment Effects") and add a reference on this topic for discussion at this point.
- The Conclusion section was poorly written.
