Dear the authors,

1. This study is at the report of the newspaper level.
2. In the Introduction, there is not enough reason for this paper to be conducted. And the originality of this study is not enough. The background and methodology of the study should be rewritten, and it is recommended to describe the reason (necessity) of this study using additional references.
3. Why did this study collect accident reports from 2006 to 2022? It is not clear why this period was selected. The authors should explain the reason for restricting publications used as CSR keywords for this period only. Why weren't previous records collected?
4. All Acronyms need to be organized. After authors first mention corporate social responsibility (CSR), they should be referred to as CSR in the following statements.

.
