Potential competing interests: No potential competing interests to declare.

First of all, the manuscript should be proofread prior to submission with regard to spelling and English composition. Secondly, the authors have provided a significant amount of data but they contain contrary conclusions, especially with regard to precipitation. Consequently, based upon these data it is difficult to arrive at any conclusion especially regarding precipitation. If possible the data should have been validated to some extent. I also suggest that the results regarding temperature trends be reporting in terms of °C/decade instead of °C/year. Thirdly, I suggest revising the Conclusion section and presenting data (viz., °C/decade) with regard to maximum and minimum temperatures.
