Gastrin/Cholecystokinin Type B Receptor

National Cancer Institute

Source

National Cancer Institute. *Gastrin/Cholecystokinin Type B Receptor*. NCI Thesaurus. Code C21598.

Gastrin/cholecystokinin type B receptor (447 aa, ~48 kDa) is encoded by the human CCKBR gene. This protein is involved in peptide hormone binding and the regulation of cell proliferation, feeding behavior, and sensory perception.
