

# Review of: "CNN-Based Road Damage Detection"

Ronnie O. Serfa Juan

Potential competing interests: No potential competing interests to declare.

1. The abstract should be expanded to include not only the implementation of the Convolutional Neural Network (CNN) but also any enhancements made to the methodology or analysis in your study. Please clarify the specific advancements and their impact on the research outcomes.
2. Please provide a detailed description of your image dataset. Include technical specifications such as the resolution, size, diversity of the images, and any preprocessing steps undertaken. This information is crucial for understanding the robustness and applicability of your findings.
3. All images included in the figures need to be enhanced for clarity. Several images are currently too blurry and difficult to interpret, which detracts from the overall quality of the paper. Consider reprocessing or replacing them to ensure that all figures are of high resolution and easily readable.
4. The conclusion of the paper should be strengthened to reflect a more academically rigorous and technically detailed synthesis of the study's findings. Highlight the implications of your research in the broader context of the field, and discuss potential future research directions based on your results.
