This article is an interesting study, and the authors have collected a unique dataset. The paper is generally well-written and structured. However, in my opinion, the paper has some shortcomings in regards to methodology, data analyses, and discussions, and I feel this unique dataset has not been utilized to its full extent. I also suggested citing more relevant and recent literature. Furthermore, I made additional suggestions for more in-depth analyses of the data regarding the chemical compositions and phytochemicals of antimicrobial Ayurveda crops. However, this shortcoming manuscript requires major revisions for publishing.
