

Review of: "Side effects of COVID-19 vaccination in Pakistani population: A cross sectional study"

Amira N. Ahmed

Potential competing interests: No potential competing interests to declare.

Thank you for giving the opportunity to read such highly valuable topic to evaluate side effects of COVID-19 vaccination covering different types of vaccines.

Some sentences need to be rephrased.

Side effects following COVID-19 Vaccination:

- Timing from receiving the vaccine till the appearance of each side effect should be stated.
- Better to categorize side effects into local and systemic.
- All side effects are subjective, but it was rather better if supplied with clinical and laboratory results.

Results: Kindly clarify what is the "extreme daily routine difficulties" the recipient may suffer?

Results and Discussion are good.

Recommendation related to further studies with larger cohorts representing all the rural and urban regions of Pakistan better to be stated as a separate point in addition to recommend studying long term side effects of the vaccine in further studies.

Thank you!
