Dear Authors, the study address an interestin topic, the role of supply chain and digital transformation to support automotive industry in post Covid-19. However, in my opinion, the research is weak. The main weaknesses are related to the fact that starting from the abstract and introduction sections it is not specified the methodology, the relevace of this study and its originality. This negativley impact the rest of the article. To overcome these limitations, I might suggest to adopt a methodology carried out through a netnography on other companies than PT.X, and a literature review on the studies focusing on supply chain and digital transformation after exgenous shock such as pandemic.

Best regards
