

# Review of: "Adopting the UTAUT model to understand academic use of emerging technologies among Moroccan nursing students"

Seren Başaran<sup>1</sup>

<sup>1</sup> Near East University

Potential competing interests: No potential competing interests to declare.

1- The rationale of the study could be improved other than mentioning that there is scarcity of data of Moroccan nursing students in the abstract section.

2-The abstract is too long. Try to limit it into 250-300 words.

3-Keywords should be in alphabetical order. Try to find keywords that are not mentioned in your title in order to increase visibility.

3- Background should serve as an introduction of the topic. The rationale of the study should be added. The reason for the framework used in the study should be explained here. There exists similar technology adoption studies in the literature, pls include these studies and discuss in relation with your research.

4- There is a title as "Literature Review and hypothesis development". However, there are quite few studies mentioned and there is no evidence where the hypotheses of the study emerged. Authors should mention the relevant studies include conceptual framework should be discussed and underneath the discussion each hypothesis of the study should be given.

5- The study uses "Poisson pseudo likelihood regression with multiple levels of fixed effects". The reason for selecting specific statistical technique should be mentioned.

6- The title statistical strategies should be changed to statistical analysis or data analysis. the hypotheses tested should be written in the statement form. If authors are looking for mediating variables these should also be mentioned in the hypotheses as well.

7- Since the hypotheses of the study were not clearly defined, which hypotheses the tables in the results section answer are not known. Pls link each of them to the study's research questions.

8- Pls explain the theoretical and practical implications rather than policy implication.

9- Findings of the study should be summarized.

10-What will be actual conclusion of the study. That part is too general.
