Potential competing interests: No potential competing interests to declare.

Reflexions and trials on teaching methods and techniques are trends as the long-term effects of teaching are researched.

This is an interesting case study on an example of a hybrid approach. The article can be improved on some points:

Explaining the general context at the beginning of the abstract.

Introducing the study at the end of the introduction

The description and discussion of the two studies should be coherent, Which study was performed first?

It is appropriate to add perspectives in the conclusion.

The work is interesting, and the authors are encouraged to pursue their trials as the students are enjoying such a new teaching approach!
