Here are some remarks to improve the contribution

- I would like to know which way the author has used to choose the antenna dimensions.
- It should be clearly defined what the difference is between the proposed method and previously published methods and why your method is better/improved. This improvement should be shown through a comparison of figures or at least through tables.
- The quality of the figures needs to be improved.
- Some figures are not cited in the text.
- Before the conclusion, a synthesis of the proposal's performances as compared to similar works from the list of refs should be added to clarify the pros and cons of the contribution.
- All references are out of date.
