Yersinia kristensenii

National Cancer Institute

Source

National Cancer Institute. *Yersinia kristensenii*. NCI Thesaurus. Code C86858.

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, positive for urease, pyrazinamidase, and ornithine decarboxylase and negative for oxidase. It is able to ferment cellobiose, sorbose, sorbitol, and trehalose but not sucrose, rhamnose, raffinose, or melibiose. *Y. kristensenii* is found in many environments and is not known to be a human pathogen.
