Potential competing interests: No potential competing interests to declare.

The proposed manuscript is a well-prepared, comprehensive, and concise case report about exertional rhabdomyolysis, a condition that may occur because of strenuous exercise. The subject under consideration is a 24-year-old male military member from the amphibious command specialization course.

The *introduction* clearly describes exertional rhabdomyolysis, its causes, and consequences.

In the *case description* and *diagnostic assessment* sections, there is a clear description of the case under consideration, his medical condition, and the diagnostic assessments performed on him. In addition, the results obtained are clearly described.

Tables are relevant and clearly presented.

In the discussion, the authors clearly explain the starting background and their results, also demonstrating the importance of the genetic and proteomic profile of individuals engaged in regular strenuous physical exercises.

There are no major flaws in this article.

The language used is fluent, simple, and allows you to understand the aim and the results of the article.

In summary, the article is written in good English, and there are no grammatical errors.
