Potential competing interests: No potential competing interests to declare.

Abstract: It is not conveying the real contribution, say "The LoRa energy consumption is reduced by 60%" – is it good, if yes why, what is the benchmark. So the abstract should represent the significant contribution that this research makes.

Introduction: Lot of mistakes in terms of punctuations which need to be checked and rectified. Sections like motivation, objectives, etc. are verbose; better reduce them and just to the point. The objectives are unclear, mixed with each other.

Methodology: Again too many details which I cannot connect to this research. The flow of the background needs to be established.

Experiments and Results section are a bit confusing since there are lot of details are being repeated.

Conclusion. Very short and abrupt close
