Autosomal recessive primary immunodeficiency with defective spontaneous natural killer cell cytotoxicity

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Autosomal recessive primary immunodeficiency with defective spontaneous natural killer cell cytotoxicity. ORPHA:437552*

A rare, genetic primary immunodeficiency characterized by recurrent respiratory and skin viral infections (Ebstein-Barr virus, herpes simplex virus, human papillomavirus), deficient spontaneous cytotoxicity of natural killer cells, but preserved antibody-dependent cellular cytotoxicity. No other abnormalities are present on immunologic work-up.
