Potential competing interests: No potential competing interests to declare.

This report presents the survey results of 75 respondents to a questionnaire on research completed by 'risk assessors'.

It contains words above the limit [>10,000 words] and is overly opinionated. There are only eight references. How many papers have already approached this issue? It is strongly recommended to expand the theoretical framework. Another issue: is that Spice Girls a valid reference?

Both the abstract and paper lack results. There should be a list of the proposed indicators
