Potential competing interests: No potential competing interests to declare.

The article describes the current novel concept of carcinogenesis to combat oral cancer. Overall, the review is considered below average. Many articles used are very old, mostly more than 10 years. Thus, there is no novelty in this review. In addition, no figures or table is provided. Finally, only one to two paragraphs briefly reviewed the treatment for oral cancer; thus, the manuscript does not answer the objective of the article. Major revision is required to improve the quality of the manuscript.
