Potential competing interests: No potential competing interests to declare.

The updated version well addresses the issues of consistency and clarity and the manuscript has been brought in a good form. Still,

- i) It would have been better if the comparative analysis had been made specific to issues like scalability, efficiency, reliability and some other parameters specific to the educational context.
- ii) A bifurcation of educational contexts like elementary or higher educational institutes for which the cloud services are focused could have been specified.
- iii) Moreover, limitations of the cloud infrastructures could also have been discussed.
