Review of: "Applying User-Centered Design Methods to Improve The Experience of the NHS APP"

Mohammad Hassanzadeh[1]

1 Tarbiat Modares University

This paper strived to apply a user-centered design for improving user experience.

Everything, including the design, literature, and writing, is acceptable.

I recommend authors:

- to enrich the methodology section, especially by articulating the validity and reliability.

- to compare the findings to those of other investigations.

This is an interesting paper.
