Potential competing interests: No potential competing interests to declare.

- Apparently, the purpose of this article is to increase public confidence in vaccination. Since the epidemic has now stopped and general vaccination is no longer a priority, and on the other hand, various studies have been published in different parts of the world on acute complications of vaccination, this article, which is only a report of acute complications, is not novel.
- I believe that it is better to report late side effects of vaccination in this article as well.
- Many tables and figures can be presented in fewer numbers.
- Written language needs correction.
