Title: "Generalized N-metric Spaces"

I have read this Paper thoroughly and have some observations:

Paper is good and can be published with minor changes.

I have some observations

1. Abstract presentation is very poor.
2. Add some background in the Introduction.
3. Is there any difference between metric space and Generalized N-metric space?
4. Conclusion presentation is very poor. Please add future research direction in conclusion section with elaboration.
5. Please add discussion section with advantage of Generalized N-metric space
