

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Abdolhassan Kazemi¹

¹ Tabriz University of Medical Sciences

Potential competing interests: No potential competing interests to declare.

Final decision: Manuscript is acceptable for publication after minor corrections.

The study entitled "Invitation to review | Rates and Reasons for Relapse of Pulmonary Tuberculosis in Adults — "Case of the MUJA Urban Health Zone" is novel and interesting. However, some minor concerns should be considered to improve the novelty as well as the flow of the manuscript:

Abstract: Current abstract is acceptable

Keywords: Current Keywords need to be rewritten as: Relapse factors, Tuberculosis, MUJA Urban

Introduction: Acceptable but could be better with a wider literature review, particularly related articles from domestic researchers.

Methodology: Acceptable

Tables and Graphs: Acceptable

Results: Acceptable

Discussion: Could be more scientific than at present level by using a more and wider literature review and explanation of related and domestic surveys, and of course, by using them as bibliography/references.

Bibliography/References: More domestic refs. are necessary. Authors should do more literature review for related domestic articles and therefore some more domestic refs. (using from domestic refs. is a scientific discipline for publication of academic data.)

I could not see the running title, acknowledgment, interest conflict statement, financial disclosure, and funding/support at the end of the manuscript. Both of these items are necessary.

Final decision: Manuscript is acceptable for publication after minor corrections as recommended, particularly regarding bibliography/references.

I can introduce some articles from the literature review and survey as below:
