Review of: "A Unified Framework for Cyber Oriented Digital Engineering using Integration of Explainable Chaotic Cryptology on Pervasive Systems"

Rajaa K. Hasoun[1]

1 University of Information Technology and Communications

1. Most of the article's paragraphs do not contain reference numbers, and this is not permissible to discuss how the information can be verified as correct.

2. The references must appear in order, with reference numbers 1, 2, and so on.

3. The reference number must be written along with the name of the figure.

4. The author must follow the rules for naming all figures in this article, where we write the figure number followed by the name of the figure only (e.g., figure 1, explainable chaotic cryptography).

5. Why did the author explain data encryption and image encryption and did not address video encryption, which is considered as rich multimedia because it contains all the elements of multimedia like text, image, sound, animation, and video.

6. Many variables used within the equations are not defined, like eq. 1, 3, 4, 5, and 7.

7. There are many variables that are defined in the equations and not present in these equations, like equations 5, 6, 7, 9.

8. In section 6.2, what is the mathematical basis that was used in the evaluation? Also, in section 6.4, the same thing.

9. There are no citations for many tables in this article, like tables 1 and 2.

10. In the body of Section 7.1, it is written (figure 6), it must be figure 5.
