

Peer Review

Review of: "Empowering Dysarthric Speech: Leveraging Advanced LLMs for Accurate Speech Correction and Multimodal Emotion Analysis"

Caslon Chua¹

1. Swinburne University of Technology, Australia

The paper presented work on using LLMs for processing Dysarthric Speech.

The paper can be improved by

- including a discussion on what the novel approach is
- highlighting the importance of the research by providing an in-depth introduction to the background, problem, and gaps, which is then supported by a comprehensive literature review that supports the selection of the approach
- clarifying whether this work is meant to be experimental or a survey as introduced
- providing an in-depth discussion on the identification of fine-tuning techniques
- presenting comprehensive findings highlighting the intended novel contribution
- completing the reference citations, as some are showing [?]
