Potential competing interests: No potential competing interests to declare.

I would like to say that I read this very interesting and timely work with great enthusiasm. The content of the study is written in fluent language, but there are areas for improvement.

The problem of the study is not clear; it is more focused on the purpose of the study. It would be more useful to present the problem of the study clearly.

I could not come across the case studies and research mentioned in the methodology; it seems more like a literature review. I suggest that these points be clarified.

Also, the recommendations are insufficient and need to be expanded and written specifically to be more inclusive.

I think it would be appropriate to publish the article after these major revisions have been made.
