The authors in this paper develop a mobile application for educational purposes, which applies some deep learning methods. However, the authors should consider the following suggestions to improve the paper.

1. The innovation of the paper is limited.
2. The technology used in the application is not clearly described.
3. In Section 4, the authors only use 118 images for evaluation, which seems to be insufficient data.
4. Whether the custom dataset created by the authors is reliable?
