

Review of: "Exploring the Impact of Future Land Uses on Flood Risks and Ecosystem Services, With Limited Data: Coupling a Cellular Automata Markov (CAM) Model, With Hydraulic and Spatial Valuation Models"

Keerti Kulkarni

Potential competing interests: No potential competing interests to declare.

The authors have presented their work very well. The following suggestions can be incorporated.

1. Please justify limited data (minimum data) in the abstract itself. Why do you consider the data used to be minimum or limited?
2. The authors have explained all the related concepts clearly, but a block diagram or a flow diagram can be included to increase the clarity of the workflow.
3. Discussion of the results has to be very exhaustive. All the results have been portrayed, but their relevance has to be discussed.
4. How are the Cellular Automata Markov (CAM) model, the Hydraulic Model, and Ecosystem Services Valuation and Mapping integrated into your work?
5. The authors need to provide more clarity on the methodology and the workflow.
6. Good luck!
